Danger Awareness Worldwide — Terror, Crime & Mass-Casualty Patterns: Plots, Actors, Roles, Settings, Eruptions, States, Meetings, Contacts & Databases	
Purpose	The dangers a citizen may be unaware of, worldwide, organized for recognition and response: what the plots are, who carries them out and in what roles, where they happen, what has actually erupted in the historical record, which states carry which dangers, how meetings are used as lures, and where to report and verify everything (official contacts and the incident databases). Behaviour-based indicators only - what people DO; appearance and identity are not indicators and are never used.
Sheets	DANGER - PLOT TYPES (23) - DANGER - ACTORS (10) - DANGER - ROLES & THEIR CRIMES (20 roles with the charges in law) - DANGER - SETTINGS & LOCATIONS (16, with coordinates) - DANGER - ERUPTIONS (HISTORICAL) (26 documented events with coordinates and a map-plot) - DANGER - STATE LIST (25) - DANGER - MEETINGS (12) - DANGER - CONTACTS & DATABASES (official reporting contacts, the GTD/RAND/CPOST databases, travel advisories, and where identifying information on fugitives is officially published).
Place in the system	This file is the awareness companion to Worst_Outcomes_Complete_System.xlsx (the worst-outcomes master + costed companion). It was moved out of that file into its own file on Oct 19, 2026; the combined file points here. The citizen response column in every sheet ties back to the solutions in that system.
What is deliberately not in this file	No personal addresses, private contacts, or social-media dossiers of involved people - including accomplices, relatives, and unconvicted suspects. Identifying information on fugitives is published, current and legally vetted, by the authorities themselves (Interpol Red Notices, national most-wanted lists); DANGER - CONTACTS & DATABASES points there. Locations and coordinates given are of PLACES - settings and historical sites - which are the geography citizens actually use.

Plot / Danger Type	Category	Description (awareness level)	Typical Settings	Where They Go — Movement & Target Patterns	Warning Indicators (behaviour-based)	Citizen Response (the solution at citizen level)	Regions Most Associated
Suicide bombing (person-borne or vehicle-borne)	Terrorism	An attacker detonates explosives at a crowded point, often at entrances, checkpoints, or queues where people bunch. The bunching point, not the building, is the target geometry.	Transit stations, markets, places of worship, checkpoints, queues, festivals	Attackers go where crowds compress: gates, security lines, bus stops at peak hour	Abandoned or unusually bulky clothing for the weather; a person visibly nervous and out of sync with crowd flow; unattended vehicles idling at crowd edges	Distance is the defence: do not bunch at gates longer than needed; report unattended items and behaviour to staff/police; if an explosion occurs, move away - secondary devices targeting responders are a documented pattern	Middle East, South Asia, Sahel and West Africa, historically Sri Lanka and Russia
Improvised explosive device (IED) left in place	Terrorism / insurgency	A device is left in a bag, vehicle, or roadside and detonated by timer or remote. Common in insurgencies against patrols and in terror campaigns against civilians.	Roadsides, transit, markets, government districts, parade routes	Placed where the target must pass: chokepoints, kerbs, bins, parked vehicles near venues	Unattended bags/boxes in places bags are not left; wires or components visible; a vehicle parked oddly and hurriedly abandoned	Never touch or move a suspect item; clear the area and tell police/staff - this is the single highest-value citizen action; note the location precisely	Iraq/Afghanistan historically; insurgency zones worldwide
Vehicle ramming	Terrorism / lone actor	A rented or stolen vehicle is driven into a pedestrian crowd. Requires no weapon procurement, which is why it recurs.	Promenades, pedestrian streets, Christmas markets, festivals, protest routes, bridge sidewalks	Long straight pedestrian stretches with vehicle access at one end	A vehicle mounting a kerb or accelerating toward pedestrians is the event itself - the only warning is engine/approach behaviour at access points	Walk on the protected side of bollards where they exist; keep an ear out (no headphones at full volume in crowd streets); if it happens: perpendicular movement - get off the vehicle's line, behind solid cover	Europe (Nice, Berlin, Barcelona, London, Stockholm, Toronto), Israel, China, USA
Armed assault / active shooter (firearms)	Terrorism / mass violence	One or more shooters attack a soft target at close range, sometimes with hostages following (Mumbai, Paris, Nairobi patterns).	Hotels, malls, concert venues, schools, offices, places of worship	Attackers enter through public entrances and move toward density and sound	Gunfire is usually the first indicator; before that: someone casing entrances/exits repeatedly, or a vehicle left running at a service entrance	RUN away from the sound if a route exists; HIDE (lock, barricade, silence phone) if not; TELL police when safe - UK Counter Terrorism Policing's official sequence, and the US Run-Hide-Fight equivalent. Do not run toward responders with anything in your hands	Worldwide; highest frequency USA (all motives), major terror cases in France, Kenya, India, Russia
Edged-weapon attack	Terrorism / lone actor	Knife or machete attacks in public space, often at transit or tourist sites; lower lethality per minute than firearms but near-zero procurement signature.	Transit hubs, tourist districts, bridges, shopping streets	Attackers go to predictable crowd density: station concourses, landmark queues	A person producing a weapon is the indicator; precursor casing is rarely visible	Distance and barriers: put mass (vehicles, furniture, luggage) between you and the attacker; RUN first; improvised shields beat engagement for untrained citizens	UK, Germany, Israel, China, Australia, Canada
Hostage-taking and barricade siege	Terrorism / criminal	Attackers seize a location and people inside it (cafe, hotel, school, theatre). The siege phase is a negotiation and media event; most deaths occur at entry or during assault.	Cafes, hotels, theatres, schools, embassies	Symbolic or high-occupancy venues with limited exits	The attack's opening is the indicator; from inside, demands and phone contact with police follow	If inside: comply outwardly, stay low and away from doors/windows, do not film visibly, escape only on a clear route; during a police assault, get flat, hands visible and empty, and expect to be treated as a suspect until cleared	France, Russia (Beslan, Moscow theatre), Australia (Sydney), Philippines, worldwide
Arson attack (public venue)	Terrorism / hate crime / criminal	Fire is set in an occupied venue, sometimes with exits blocked. Fire and smoke kill faster than flames.	Nightclubs, places of worship, hostels, factories, schools	Attackers target venues with single exits and flammable interiors	Smell of accelerant, a person leaving hurriedly against crowd flow, fire alarm with visible smoke	Exit is the entire response: leave by ANY route including windows at low floors; stay low under smoke; never re-enter; pull the alarm and shout - most venue fire deaths involve delayed evacuation, not the fire itself	Worldwide (nightclub fires: Brazil, North Macedonia, Russia; arson attacks on worship sites globally)
Chemical / biological / radiological (CBR) release	Terrorism / state	Toxic agents released in enclosed or transit spaces (Tokyo sarin 1995 is the template). Rare, technically demanding, and usually low-yield in practice.	Subways, enclosed transit, government districts, arenas	Enclosed air systems: underground stations at peak hour	Multiple people collapsing or with identical sudden symptoms in one area; an abandoned spray/package device; unusual chemical smell reported by many at once	Move UPWIND and out of the enclosed space immediately; do not use lifts; cover nose/mouth with cloth; once out, remove outer clothing before entering clean buildings if authorities direct it; call emergency services and state the pattern	Japan (1995), Syria (state use in war), UK (Salisbury 2018, targeted), Iraq
Drone attack (small UAS)	State / proxy / insurgent	Small drones drop munitions or strike as one-way attackers, mainly in war zones and increasingly against infrastructure and gatherings there.	Frontline cities, energy infrastructure, military-adjacent areas, mass gatherings in conflict zones	Loitering over infrastructure or crowds in conflict regions	A small drone loitering low over a crowd or facility in a conflict zone	In conflict zones: treat loitering unknown drones as a reason to take cover indoors; elsewhere, report to police - do not approach a downed drone	Ukraine, Middle East, Myanmar, Sahel
Infrastructure sabotage (power, water, rail)	State proxy / extremist / criminal	Substations shot or sabotaged, rail signalling attacked, water systems intruded on - aimed at disruption and fear rather than immediate casualties.	Substations, rail corridors, water plants, telecom nodes - usually unmanned and rural/suburban	Attackers go to the unmanned nodes, typically at night	Prolonged unexplained outages; intruders at utility fencing; official alerts	Citizen role is endurance and reporting: this is what the household grid/water builds in this file are FOR; report fence-line intruders to police/utility, never confront	USA (substation shootings), Europe (rail sabotage), Ukraine (war)
Parcel / letter devices	Terrorism / targeted	Explosive or harmful packages sent to specific people or organisations.	Mailrooms, offices of public figures, universities, media, embassies	Delivered to named targets through normal mail/courier	Unexpected parcel with excessive postage/tape, misspellings, no return address, leaking or odorous - the classic mailroom indicator list	Do not open, shake, or carry it to others; isolate the room, wash hands if handled, call police. Organisations: the mailroom is the checkpoint	USA (Unabomber era; 2018 mail bombs), Spain, worldwide sporadically
Poisoning of food or water (targeted or mass)	Criminal / terror / state	Contamination at production, distribution, or point of sale - from product tampering to targeted poisonings of individuals.	Supermarkets, restaurants, water systems, events with communal food	Point-of-sale shelves and communal serving points	Tampered packaging; sudden clusters of identical food-poisoning symptoms traced to one product or venue	Stop consuming, keep the packaging, seek medical care and report - retained product/packaging is the evidence that protects everyone else	USA (1982 Tylenol tampering - criminal), Japan, targeted state poisonings (UK, Malaysia airport VX case)
Crowd crush / stampede (not an attack - the most common mass-casualty 'eruption' of all)	Mass-gathering disaster	Density itself kills: above roughly 6 people per square metre, compressive asphyxia occurs standing up, silently, usually at bottlenecks, tunnels, and counter-flows. Kills far more people worldwide than terrorism.	Festivals, religious pilgrimages (Hajj), concerts, stadium entries/exits, New Year gatherings, sales events	Crowds go where the event is; danger concentrates at merges, slopes, dead ends, and entry gates	Density you cannot move your arms in; being lifted off your feet; a wave motion through the crowd; people climbing to escape density	Avoid the dense core early - edges are survival; if caught: keep arms up in a boxer's guard to protect breathing space, move diagonally toward lower density, never go against the flow or bend for dropped items; if you fall, fetal position protecting head and chest	South Korea (Itaewon 2022), India (recurrent pilgrimage crushes), Saudi Arabia (Hajj), Germany (Love Parade 2010), USA (Astroworld 2021)
Mob violence / pogrom / riot targeting a group	Communal violence	Crowds attack an identified group, its homes, businesses, or worship sites - usually rumour-triggered and locally organized, erupting within hours.	Mixed neighbourhoods, worship sites, markets of the targeted group	Mobs go to known addresses and symbols; lists of targets sometimes circulate beforehand	Viral rumour (often a forwarded video/message), unusual gatherings of young men, police withdrawal, targeted businesses closing early	Leave the area early on rumour-stage signals - this danger is survivable almost purely by timing; shelter with trusted contacts outside the zone; document only from safety	South Asia (recurrent), Myanmar, Nigeria, Indonesia, historically Europe; sporadic hate-mob events worldwide
Kidnapping - ransom and express	Criminal / insurgent	Ransom kidnapping holds victims days to months; express kidnapping forces ATM withdrawals over hours, usually from a taxi or street pickup.	Tourist zones, expat districts, unlicensed taxis, nightlife areas, highways (false checkpoints)	Victims are selected at airports, hotels, bars, and taxi queues - places wealth is displayed and routines are set	An unlicensed taxi insisting; a 'police' checkpoint of unmarked vehicles at night on an isolated road; new acquaintances steering you to a second location	Licensed transport only, arranged by hotel/app; vary routines in high-risk regions; surrender valuables in express events - survival first; register travel with your embassy in high-risk states	Latin America (express), Nigeria, Philippines (Abu Sayyaf), Sahel, Haiti, South Africa
Carjacking	Criminal	Vehicle taken by threat at stops, driveways, or parking areas; sometimes the opener to kidnapping.	Intersections, parking garages, driveways, fuel stations at night	Stopped vehicles with a lone driver in low-traffic areas	A vehicle blocking yours in an empty area; loiterers at garage exits	Give the vehicle - it is insured, you are not; keep doors locked and gaps to escape at stops; report immediately (early reports drive recovery)	South Africa, Latin America, USA, Nigeria
Home-invasion crew	Criminal	A team forces entry to an occupied home, often with inside information about valuables; distinct from burglary by the intent to confront occupants.	Affluent suburbs, homes of business owners, rural properties	Crews go where cash/business proceeds are believed kept, often after surveillance of routines	Unknown 'utility/delivery' callers testing occupancy; marked properties; strangers photographing the house	Do not open to unverified callers; if entry is forced, comply over property, escape beats hiding, call police from the safest room; the hardening items in this file (Security - Now) are the prevention	South Africa, Latin America, rural Europe, North America (targeted)
School / workplace rampage (non-ideological)	Mass violence	A current/former student or employee attacks their own institution. Leakage - telling someone beforehand - precedes most cases.	Schools, universities, offices, factories	The attacker goes to their OWN institution, usually in its operating hours	A person of concern sharing plans, fixations, or farewell behaviour - the 'leakage' that peers and coworkers most often hear first	Take leakage seriously and report it - it is the most effective prevention channel that exists; in an event: Run-Hide-Tell; institutions: drills and locked classroom doors save measurable lives	USA (highest frequency), cases in Brazil, Russia, Germany, China (school knife attacks)
Swatting and doxxing-to-physical	Harassment escalation	A fake emergency report sends armed police to a victim's address; doxxing publishes the address to invite it. The danger arrives as the response itself.	Homes of streamers, activists, officials, journalists - anywhere	The 'attackers' go nowhere; they send the state	Police arriving in force without any local incident is the event	Comply instantly and visibly with responders (hands empty, slow movements) - they believe an armed suspect is inside; afterwards, report the swatting call itself as the crime it is	USA primarily; spreading with streaming culture
Meeting-point lures (scams turning physical)	Criminal	A date, sale, rental viewing, job interview, or 'investment meeting' arranged online moves the victim to a controlled location for robbery, assault, or worse.	Second locations: cars, short-stay rentals, empty properties, parking lots at night	The lure's whole design is moving you from the public first place to the private second one	Pressure to move locations, to come alone, to keep the meeting secret, or to bring cash/the item itself	First meetings in public, staffed places, in daylight; tell a person where and when; your own transport; never relocate with the counterparty - the refusal IS the test and the defence	Worldwide - marketplace and dating platforms everywhere
Drink spiking / incapacitation robbery and assault	Criminal	A victim's drink is drugged in nightlife settings; outcomes range from robbery to sexual assault. Needle spiking is reported but drink tampering is the documented main route.	Bars, clubs, festivals, house parties	Offenders go where drinks are carried through crowds and left on ledges	A drink that tastes off, sudden disproportionate intoxication, a stranger unusually invested in your drink	Drinks poured/opened in front of you and held, never set down in crowds; friends operate a watch system; venues increasingly provide testing strips and covers - ask	Worldwide nightlife
Cult mass-casualty events	Group / ideological	A closed group's leader drives mass death - suicide, murder of members, or attacks outward (Aum, Jonestown, Heaven's Gate patterns). The warning period is long and social.	Isolated compounds, communes, and closed online communities	The group withdraws geographically or socially - isolation precedes the eruption	A member cutting family contact under group pressure; escalating apocalyptic deadlines; weapons or bulk supplies acquired by a charismatic-led group	For families: maintain contact lines with members (isolation is the mechanism), report weapons/threats to police; authorities: the intervention window is the isolation phase, not the deadline week	Japan (Aum), Guyana (Jonestown), USA, Uganda (Kanungu), South Korea (various)
Prison and detention violence eruptions	Criminal / institutional	Gang wars, riots, and mass escapes inside prisons periodically erupt into massacres - relevant to anyone living near facilities or with family inside.	Prisons and detention centres, especially overcrowded gang-segregated ones	Violence goes cell-block to cell-block; escapes go over walls into surrounding neighbourhoods	Official alerts, visible smoke, road closures near a facility	Shelter in place on official alerts after escapes/riots nearby; never approach a facility during an event; families: use official information lines only	Latin America (Ecuador, Brazil, Honduras), worldwide sporadically

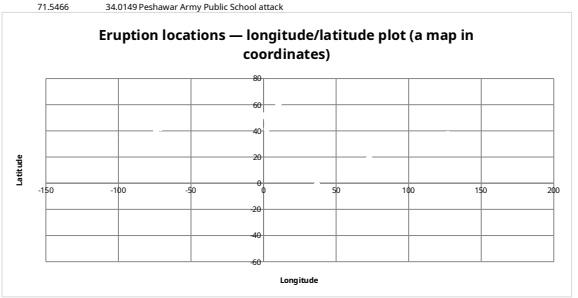

Actor Type	Description	Accomplices & Allies Pattern	Where They Operate / Go	Indicators a Citizen May See	Citizen Relevance & Response
Lone actor	A single person radicalised or aggrieved alone, usually online; the dominant terror format in Western countries now. Leakage to family/peers is common.	No accomplices by definition; 'allies' are online audiences and manifestos	Goes to the nearest symbolic or crowded soft target	Fixation + leakage: statements of intent, sudden weapons interest, farewell behaviour - seen by family, coworkers, classmates	The citizen's role is upstream: report credible intent statements to police. In the event: Run-Hide-Tell.
Cell / network	A small group with divided roles (procurement, reconnaissance, execution), sometimes directed or merely inspired by a larger organisation.	Accomplices are the structure: lookouts, drivers, safe houses, financiers	Reconnoitres targets repeatedly before acting; strikes where rehearsed	Repeated presence photographing security (not scenery), testing entrances, timing guards - behaviour, not appearance, is the indicator	Report surveillance behaviour to venue staff or police - pre-attack reconnaissance is the most interruptible phase.
State sponsor / proxy	A state funds, arms, or directs non-state attackers to keep deniability; the citizen experiences it as ordinary terrorism with better equipment.	Allies are diplomatic and logistical: documents, safe passage, money routes	Proxies go where the sponsor's foreign policy points: embassies, dissidents abroad, rival allies' cities	Usually invisible at citizen level until the attack	Citizen relevance is travel awareness: official advisories track sponsor-proxy tensions by country.
Mercenaries / private military companies (PMCs)	Hired armed companies (Wagner/Africa Corps is the current archetype) fight for states or strongmen for pay and resource concessions. Their danger to citizens is conduct in war zones: massacres of civilians are documented (Mali, CAR).	Allies: the hiring regime and resource-extraction partners; accomplices: local militias they train	Go where contracts are: mines, capitals, front lines of weak states - primarily sub-Saharan Africa, also Ukraine, Syria, Libya historically	Unmarked armed convoys, foreign fighters at checkpoints, mining sites under new armed guard	Citizens in such regions: avoid PMC-controlled roads/sites, follow embassy guidance; travellers: these regions are already top-tier advisory zones - the PMC presence is one reason why.
Foreign ('alien') operatives and fighters	Nationals of one country operating in another: intelligence officers, special forces in plain clothes, foreign terrorist fighters travelling to conflicts, sleeper agents.	Allies: their home state's services; accomplices: local facilitators for documents and housing	Go to capitals, diaspora communities, conflict zones, and critical-infrastructure areas	At citizen level: essentially invisible; arrests and expulsions are the public trace	No citizen action beyond general awareness; this category explains some 'inexplicable' incidents in news (poisonings, sabotage) - listed so the map is complete.
Fugitives and manhunt subjects	Wanted persons fleeing - escaped prisoners, attack suspects, cartel figures. The danger is the manhunt zone itself: armed, desperate people moving through civilian space, and heavy police operations around them.	Accomplices: family/sympathizer networks who shelter them; allies: smuggling routes	Go to ground in familiar territory: relatives' areas, rural hideouts, border crossings	Official alerts with descriptions; roadblocks; helicopters; a stranger seeking food/shelter/transport urgently off-book	Follow official alerts literally (shelter, lock, report sightings, do not approach or harbour); sightings phoned in end most manhunts.
Cartels and organized-crime armies	Trafficking organisations fielding military-grade force in their territories (Mexico, Ecuador, Brazil factions, Haiti gangs). Citizen danger is territorial: being in the wrong street during a confrontation, or mistaken for a rival/informant.	Allies: corrupt officials and local businesses; accomplices: neighbourhood lookouts (halcones)	Go where the routes and retail markets are: border corridors, ports, specific colonias/favelas	Locals know the map: ask them. Signals: businesses closing early en masse, roadblocks by non-uniformed armed men, sudden silence of a normally busy area	Local knowledge is the defence: hotel staff, drivers, and residents know which areas are whose TODAY; heed curfew rumours instantly; never photograph armed groups.
Insurgents / guerrillas	Armed movements controlling or contesting rural territory (Sahel juntas' opponents, Myanmar resistance, remaining Latin American groups).	Allies: sympathetic villages and external backers; accomplices: tax/levy networks	Rural corridors, mining/agriculture zones, ambush-prone roads	Illegal checkpoints, 'taxes' on transport, villages emptied ahead of fighting	Travel only on current local advice; main roads by day; an empty village on a route is a stop signal, not a curiosity.
Cults and apocalyptic groups	Closed charismatic groups whose eruptions are inward (mass suicide/murder) or occasionally outward (Aum). See also the cult plot entry.	Allies: front businesses and recruiters; accomplices: the inner circle	Withdraw to compounds or closed communities	Isolation of members, apocalyptic deadlines, bulk purchases	Families keep contact; report weapons and threats.
Gangs (street/prison) in eruption	Gang wars periodically erupt into public massacres, prison massacres, or city shutdowns (Haiti, Ecuador, El Salvador pre-crackdown, Sweden's bombing/feud pattern).	Allies: neighbourhood networks; accomplices: child lookouts and couriers	Their own neighbourhoods and rivals' - the violence is territorial and address-specific	Funeral gatherings targeted (a known pattern), graffiti changes, locals relocating quietly	Address-level awareness: the danger map is street-by-street and locals hold it; visitors should not improvise routes in gang-contested districts.

Role in a Plot / Network	What the Role Does	Their Crimes — The Charges in Law (Canada cited; equivalents exist in most jurisc	Documented Example (public record)	How a Citizen Encounters / Reports This Role
Leader / emir	Sets strategy, approves targets, allocates money and people. Rarely touches a weapon.	Directing a terrorist group; instructing terrorist activity (Canada Criminal Code s.83.20-83.21 - up to life); conspiracy to murder (s.465); counselling offences (s.83.22)	Osama bin Laden directed al-Qaeda's strategy and approved the 9/11 operation (9/11 Commission record; killed 2011)	Citizens almost never encounter this role directly; its public trace is propaganda and claims of responsibility
Operational planner	Converts strategy into a specific plot: target, date, method, rehearsals.	Conspiracy (s.465); instructing/facilitating terrorist activity (s.83.19-83.21 - up to life); attempted murder where steps are complete	Khalid Sheikh Mohammed, planner of 9/11 (captured 2003; military commission proceedings)	Invisible at citizen level; planners are found by intelligence, not by publics
Handler / coordinator	Runs the attackers at a distance - by phone, messages, money drops - during preparation and sometimes during the attack itself.	Facilitating terrorist activity (s.83.19 - up to 14 years); counselling (s.83.22); party to every offence the attackers commit (s.21)	Mumbai 2008: handlers in Pakistan directed the gunmen by phone throughout the siege (trial and inquiry record)	A person in intense directed contact with travellers/departing fighters is a reporting signal for families - the NSIN line in CONTACTS & DATABASES is the route
Recruiter	Finds and persuades new members, typically among the aggrieved, the young, and the isolated - in person and online.	Participating in / facilitating a terrorist group (s.83.18-83.19); counselling (s.83.22); where minors are involved, additional exploitation offences	Anwar al-Awlaki recruited for al-Qaeda in the Arabian Peninsula largely through online sermons (killed 2011)	Families and teachers see this role first: a new intense 'friend' or online figure isolating a young person is the classic encounter - report via NSIN / local police safeguarding
Propagandist / media producer	Makes the videos, magazines, and channels that radicalize and claim attacks; a force multiplier treated by courts as a participant, not a bystander.	Participating in a terrorist group (s.83.18); counselling and incitement offences; distributing terrorist propaganda (s.83.27 seizure/forfeiture provisions and platform law)	ISIS's al-Hayat media centre professionalized this role; its producers were targeted and prosecuted as members	Citizens encounter this role as content: the action is non-amplification (do not share attacker media) plus reporting the account to the platform and, for credible content, to police
Financier	Raises, moves, and launders the money: donations, front charities, crime proceeds, state funds.	Terrorist financing (s.83.02-83.04 - up to 10 years); money laundering (s.462.31); fraud; sanctions offences	The 9/11 plot was financed (~$500k) through wire transfers and couriers from facilitators in the UAE and Germany (9/11 Commission record)	Encountered as suspicious fundraising: charities that cannot say where money lands, cash-collection pressure - report to police / the NSIN; in Canada, FINTRAC-reporting entities see the transaction side
Money courier / hawala mover	Physically or informally moves value across borders outside the banking system.	Terrorist financing (s.83.02); laundering (s.462.31); customs/currency reporting offences	Hawala networks moved al-Qaeda funds pre-9/11 (Commission record); cash couriers remain a staple of cartel and terror finance alike	Bulk-cash smuggling is a border-agency encounter, not a citizen one; citizens see the collection end (see Financier)
Bomb-maker / technician	Builds the devices; often the most technically skilled and most protected member. Also the role most often killed by its own work (the Alcanar explosion before Barcelona).	Explosives offences (s.79-82 - up to life where injury/death intended); making/possessing devices for a terrorist group (s.83.18-83.19); murder where devices kill	Ramzi Yousef built the 1993 World Trade Center bomb (convicted, life sentence, USA)	Citizens encounter this role's SHADOW: chemical/gas anomalies and precursor purchases at rental properties (the Barcelona lesson) - report smells, burns, and unusual deliveries to police/fire, never investigate yourself
Weapons procurer	Buys, steals, or smuggles firearms and components; in Europe, reactivates deactivated weapons or converts blank-firers.	Firearms trafficking (s.99-101 - mandatory minimums and up to life for trafficking); smuggling; participating in a terrorist group	The Paris 2015 attackers' Kalashnikovs came through Balkan surplus and Belgian/French criminal markets (trial record)	Encountered as gun-crime generally: illegal gun offers and thefts from legal owners are police matters - report offers, secure your own firearms to standard
Forger (documents)	Produces false passports, IDs, and papers that move people and money past checkpoints.	Forgery and uttering forged documents (s.366-368); identity fraud (s.402.2); facilitating terrorist activity (s.83.19)	The Paris/Brussels network ran a forgery workshop producing documents for the cell (Belgian trial record)	Landlords and employers encounter this role's product: documents that do not verify. The defence is verification itself, through official channels
Smuggler (people and goods)	Moves fighters, fugitives, weapons, and contraband across borders - the same routes serve migrants, drugs, and terror logistics.	Organizing illegal entry / human smuggling (IRPA s.117); trafficking in persons (s.279.01); smuggling under the Customs Act; facilitating (s.83.19) where terror-linked	Forged-document and smuggling support surrounded the Paris attackers' movements within Europe (trial record)	Border communities see this role; the citizen action is reporting crossing activity to border services, not interception
Safe-house provider	Rents or lends the apartment, garage, or farm where plots are prepared and attackers hide - before and after.	Harbouring or concealing (s.83.23 - up to 10 years, more where the concealed offence carries life); accessory after the fact (s.23); participating (s.83.18)	Brussels 2016: the attackers' bomb factory and hideouts were ordinary rented flats in Schaerbeek and Forest (trial record)	Landlords are the citizens who meet this role: short unvetted cash rentals, blacked-out windows, chemical smells - the reporting guidance in CONTACTS applies; several Paris/Brussels sites were flagged by exactly such observations
Driver / transport	Moves attackers and materiel; in vehicle attacks, the driver IS the weapon. Sometimes an unwitting hire, sometimes a member.	Party to the offences (s.21); where the vehicle is the weapon: murder, attempted murder, dangerous operation causing death (s.320.13)	Nice 2016 and Berlin 2016: rented/hijacked trucks; in Berlin the legitimate Polish driver was murdered first - he is counted among the victims, correctly	Rental and haulage staff are the encounter point: cash rentals of large trucks by nervous first-time customers are a documented precursor - report through employers/police
Lookout / reconnaissance	Cases targets: photographs security (not scenery), times guards and cameras, tests entrances, walks routes.	Participating in a terrorist group (s.83.18); conspiracy (s.465); the reconnaissance itself is usually charged as part of the plot offences	Reconnaissance behaviour preceded the Westgate, Paris, and Mumbai attacks; Mumbai's targets were scouted by David Headley (convicted in the USA for the reconnaissance role)	THIS is the role citizens most usefully interrupt: venue staff and the public reporting casing behaviour is the main citizen-level prevention in this whole section - ACT/NSIN routes in CONTACTS
Attacker (shooter / bomber / driver)	Executes the attack. Frequently the least informed member - cells compartmentalize so the captured attacker knows least.	Murder (s.235 - life, 25 years parole ineligibility for first degree); attempted murder; explosives and firearms offences; terrorism sentencing provisions (s.83.27 consecutive sentences)	The 19 hijackers of 9/11; the four London 7/7 bombers - all died in their attacks, the commonest outcome for this role in suicide formats	Citizens encounter this role only in the event itself: Run-Hide-Tell (or Run-Hide-Fight) is the response, in CONTACTS & DATABASES
Sleeper	Lives an ordinary, law-abiding cover life for months or years until activated; the Hamburg cell lived as students.	Participating in a terrorist group (s.83.18); the activation offences themselves; immigration fraud where applicable	The Hamburg cell (Atta and others) lived openly as students while preparing 9/11 (Commission record)	By design, nearly invisible; the citizen-level lesson is that ordinariness is not evidence either way - behaviour (leakage, procurement, casing) is the only reliable signal class
Insider facilitator	An employee or trainee who abuses trusted access - base, airport, utility, police, or venue staff.	Facilitating (s.83.19); breach of trust offences; the substantive offences as party (s.21); Official Secrets / security-of-information offences where state information is passed	Pensacola NAS 2019: a foreign military trainee attacked his own training base (FBI investigation record); Sri Lanka 2019's bombers were insiders of the business elite by birth	Employers and colleagues see the leakage and procurement signals; insider-threat reporting channels at work are the route
Accomplice after the fact	Helps after the attack: hides the fugitive, destroys evidence, lies to investigators, moves money or vehicles.	Accessory after the fact (s.23 - up to life where the principal offence is life); harbouring (s.83.23); obstructing justice (s.139); perjury/false statements	Boston 2013: the bomber's friends removed a backpack of evidence from his dorm room - convicted of obstruction and conspiracy (US federal record)	Families face this temptation in its hardest form; the lawful and ultimately kindest act is counsel + police contact early - the Boston friends' prison terms are the standing example
Online facilitator (channel admin / technical)	Runs the encrypted channels, bots, file drops, and payment addresses the network lives on.	Participating in / distributing for a terrorist group (s.83.18); counselling (s.83.22); computer offences (s.342.1) where systems are abused	Successive generations of ISIS and far-right networks have been disrupted by arresting exactly this layer (Europol referral actions, reported annually in TE-SAT)	Citizens meet this role as recruiters' storefront: report accounts to platforms; credible operational content goes to police (NSIN)
Child recruiter / exploiter	Grooms minors into roles - couriers, lookouts, wives, and in the Surabaya case, bombers; treated in law as among the gravest roles.	All the group offences above plus: trafficking in persons under 18 (s.279.011 - mandatory minimums), child exploitation offences, and in armed-conflict law, war crimes for recruiting child soldiers	Surabaya 2018: three families, including children aged 9-18, bombed churches (Indonesian police record) - the case that rewrote the family-unit model	Teachers, youth workers, and parents are the encounter: sudden isolation + a controlling new influence + travel talk is the reportable pattern (Five Eyes youth guidance, in CONTACTS)

Setting	Example Locations Worldwide	Approx. Coordinates (lead	Dangers Concentrated There	Peak-Risk Pattern	Protective Actions
Transit stations & metro systems	London Underground, Madrid Atocha, Brussels Maelbeek, Moscow Metro, Tokyo Metro	51.5074, -0.1278 (London)	Bombings, chemical release (Tokyo), armed assault, crowd crush at rush hour	Morning/evening peak; the platform and the train doorway bunch hardest	Keep moving through concourses; stand back from platform edges and unattended items; know the next station's exit layout by habit
Places of worship	Churches Sri Lanka 2019, mosques Christchurch 2019, synagogues Pittsburgh/Halle, Sikh temple Wisconsin	6.9271, 79.8612 (Colombo)	Armed assault, suicide bombing, arson, vehicle attack on queues	Major festivals (Easter, Ramadan Fridays, High Holidays) at entry/exit bunching	Congregations increasingly use greeters-as-observers and locked-after-start doors - support both; as a visitor, note exits on entry like any venue
Open-air festivals, parades & promenades	Nice Promenade des Anglais, Boston Marathon finish, Berlin Christmas markets, Re'im festival site	43.6947, 7.2620 (Nice)	Vehicle ramming, bombing, armed assault, crowd crush	National days, religious festivals, event finales when crowds surge to exits	Walk behind barriers/bollards; position near lateral exits at finales; the 30-second exit scan on arrival (Security - Future, this file)
Markets & shopping districts	Christmas markets (Berlin, Strasbourg threat), souks, night markets, Westgate & malls (Nairobi, Munich)	52.5049, 13.3352 (Berlin Breitscheidplatz)	Vehicle ramming, bombing, armed assault, pickpocket/distraction teams (the everyday danger)	Holiday seasons, weekends, sale events	Bollarded entries matter; keep valuables zipped and forward-facing; in an incident the market's side streets are the exits - know two
Hotels (international)	Mumbai Taj/Oberoi, Jakarta Marriott, Kabul Intercontinental, Bamako Radisson	19.0760, 72.8777 (Mumbai)	Armed siege, bombing of lobbies/restaurants	Conferences, diplomatic and media presence	Room between floors 3-6 (above street attack, within ladder reach is the classic guidance); know the stairwell from your room in the dark - count the doors
Schools & universities	Beslan, Peshawar APS, Garissa University, Sandy Hook, Parkland, Virginia Tech	43.1900, 44.5450 (Beslan, approx.)	Armed assault, hostage siege, knife attacks (China pattern), non-ideological rampage	School hours; anniversaries of prior attacks (copycat pattern)	Leakage reporting is the prevention; lockdown drills and lockable classroom doors are the mitigation - support both as a parent/citizen
Hospitals & clinics	Attacked in war zones repeatedly (Gaza, Ukraine, Syria, Afghanistan); also targets of grievance violence	34.5659, 69.2818 (Kabul)	Bombing (incl. follow-on attacks on responders), armed assault, ambulance-borne devices in war zones	Immediately after mass-casualty events - the cruel pattern of striking the receiving hospital	As a visitor: comply with hospital security checks without complaint - they exist because of this row
Government buildings, courts, embassies	Oklahoma City federal building, embassies worldwide, parliament attacks (London, Ottawa, Vienna)	35.4729, -97.5169 (Oklahoma City)	Vehicle bombs, armed assault, lone-actor attacks	Symbolic dates, verdict days, elections	Keep visits purposeful and brief in protest periods; never leave vehicles in restricted zones - yours will be treated as suspect
Concert halls & theatres	Bataclan Paris, Manchester Arena, Moscow Crocus City Hall, Moscow Dubrovka theatre	48.8631, 2.3709 (Bataclan, Paris)	Armed assault, hostage siege, bombing at exits (Manchester pattern: the foyer at finale)	The finale/exit surge	Exits on entry - count them; in an attack the stage doors and service corridors are also exits; at the finale, leaving 3 minutes early beats the foyer crush in every model
Stadiums & sporting events	Stade de France (attacked outside), Kabul cricket, marathon finishes	48.9244, 2.3601 (Stade de France)	Bombing at gates, armed assault, crowd crush (the historic mass killer in this setting)	Entry gates pre-match; exits at final whistle	Arrive early enough to avoid gate compression; the crush risk is at gates, not seats
Restaurants, cafes & nightlife streets	Paris terraces 2015, Istanbul Reina nightclub, Orlando Pulse, Vienna 2020, Sydney Lindt cafe (siege)	48.8566, 2.3522 (Paris)	Armed assault, siege, drink spiking, crowd-crush in club fires	Weekend nights; terraces in warm months	Sit with a view of the door and a route behind you that is not the door; in clubs, locate the second exit - club disasters are exit disasters
Beaches & resort zones	Sousse (Tunisia) beach attack, Bali Kuta, Sharm el-Sheikh	-8.7176, 115.1760 (Kuta, Bali)	Armed assault on tourists, bombings of nightlife	Peak tourist season	Resort security perimeters exist because of this row; outside them, the promenade rules of festivals apply
Election & political gatherings	Rallies and campaign events (assassination attempts: USA 2024, Slovakia 2024, Japan 2022), polling places in polarized regions	40.8530, -79.8730 (Butler, PA, approx.)	Assassination attempts, bombing, mob violence	Campaign peaks; results nights	Perimeters and screening are the mitigation; as an attendee, the exit-scan habit applies doubly
Funerals & religious processions	Funeral bombings (Iraq, Afghanistan pattern), Ashura processions, Janaza gatherings	33.3152, 44.3661 (Baghdad)	Suicide bombing - funerals of bombing victims are themselves targeted (the double-atrocity pattern)	Immediately following prior attacks	Awareness that gatherings honouring victims are a known secondary target is grim and necessary in affected regions
Airports (landside)	Brussels Zaventem, Istanbul Ataturk, Kabul airport gates 2021, Domodedovo	50.9010, 4.4844 (Brussels Airport)	Bombing/shooting in check-in halls and gate queues - the landside, before security, is the exposed zone	Peak departure banks; evacuation/chaos events (Kabul)	Minimize landside dwell time: check in, go through security; meet arrivals inside the flow, not in static crowds at the doors
Pipelines, substations & remote infrastructure (as settings citizens live near)	Substations (USA shootings), Nord Stream (state sabotage, Baltic Sea)	54.2500, 18.9667 (Baltic, approx. Nord Stream site)	Sabotage causing regional outages - the citizen impact is the outage, not the blast	Crisis and war periods	This is what the household energy/water builds answer; report fence-line intruders, never confront

Eruption (Historical Event)	Year	Location	Approx. Coordinates	Setting	Actors (organisations; principals named in the public record whe	What Happened	Lesson for Citizens
Tokyo subway sarin attack	1995	Tokyo, Japan	35.6812, 139.7671	Metro system	Aum Shinrikyo cult	Cult members released sarin on five trains at rush hour; 13 dead, thousands injured	Enclosed transit is the CBR setting; moving out and upwind is the citizen response
Oklahoma City bombing	1995	Oklahoma City, USA	35.4729, -97.5169	Federal building	Domestic extremist + accomplice	A truck bomb destroyed the Murrah Building; 168 dead	Vehicle access to symbolic buildings is the control point; building setbacks exist because of this
US embassy bombings	1998	Nairobi, Kenya & Dar es Salaam, Tanzania	-1.2864, 36.8172	Embassies	Al-Qaeda cell + local accomplices	Simultaneous truck bombs; 224 dead, mostly local passersby and staff	Embassy districts export risk to their neighbours; perimeter distance saves bystanders
9/11 attacks	2001	New York & Arlington, USA	40.7115, -74.0134	Airliners, towers, Pentagon	Al-Qaeda network (19 hijackers + sponsor state-tolerated network)	Four hijacked airliners; 2,977 dead	Aviation security was rebuilt worldwide from this single morning; cockpit doors are its monument
Bali bombings	2002	Kuta, Bali, Indonesia	-8.7176, 115.1760	Nightlife district	Jemaah Islamiyah cell	Car bomb + suicide bomb in a tourist strip; 202 dead, mostly foreign tourists	Tourist nightlife is a named target class; venue exit awareness applies
Madrid train bombings	2004	Madrid, Spain	40.4065, -3.6910 (Atocha)	Commuter trains	Local cell inspired by Al-Qaeda	Ten rucksack bombs on four trains; 193 dead	Left-luggage vigilance on commuter rail comes from this and London
Beslan school siege	2004	Beslan, Russia	43.1900, 44.5450	School	Chechen separatist militants	1,100+ hostages; 334 dead including 186 children after a storming	Schools are hostage targets in separatist wars; the siege rules in the plots sheet apply
London 7/7 bombings	2005	London, UK	51.5252, -0.0875 (Aldgate, approx.)	Underground + bus	Homegrown cell (4 suicide bombers)	52 dead across three trains and a bus	Homegrown cells need no travel signature - behaviour and leakage are the only citizen-level indicators
Mumbai attacks	2008	Mumbai, India	19.0760, 72.8777	Hotels, station, cafe, Jewish centre	Lashkar-e-Taiba (10 gunmen, sea-borne, externally handled)	60-hour multi-site siege; 166 dead	The modern siege template: multiple sites, handlers by phone, media-aware; hotel guidance in settings comes from this
Utøya & Oslo attacks	2011	Norway	60.0237, 10.2475 (Utøya)	Government district + youth camp	Lone actor (far-right)	77 dead; a bomb as diversion, then a methodical island shooting	Isolated gathering sites (islands, camps) have one-exit geometry - the setting lesson
Westgate mall attack	2013	Nairobi, Kenya	-1.2566, 36.8039	Shopping mall	Al-Shabaab cell	Four-day siege; 67 dead	Malls: service corridors and loading docks are exits staff know and shoppers do not - ask once, remember
Boston Marathon bombing	2013	Boston, USA	42.3498, -71.0788	Marathon finish line	Two brothers (lone pair)	Pressure-cooker bombs in backpacks; 3 dead, hundreds maimed; citywide manhunt followed	Backpacks at crowd edges of finish lines are the post-2013 screening reason; manhunt rules are in the actors sheet
Peshawar Army Public School attack	2014	Peshawar, Pakistan	34.0149, 71.5466	School	Tehrik-i-Taliban Pakistan (7 gunmen)	149 dead, mostly schoolchildren	The school row needs no further argument
Paris November attacks	2015	Paris, France	48.8631, 2.3709 (Bataclan)	Stadium, cafes, concert hall	ISIS-directed cell with accomplices across Belgium	130 dead in coordinated shootings and suicide bombs	Terraces + venue + stadium simultaneously - the multi-setting night that made Run Hide Tell public doctrine in Europe
San Bernardino / Orlando (Pulse)	2015 / 2016	California & Florida, USA	28.5195, -81.3766 (Pulse)	Workplace party; nightclub	Lone actors (pledged)	14 and 49 dead respectively	Workplaces and nightlife are the US-frequency settings; both events drove Run-Hide-Fight training adoption
Nice truck attack	2016	Nice, France	43.6947, 7.2620	Promenade, Bastille Day	Lone actor	A rented truck drove 2 km through the crowd; 86 dead	Bollards and vehicle barriers at pedestrian events worldwide date from this night
Brussels airport & metro attacks	2016	Brussels, Belgium	50.9010, 4.4844	Airport landside + metro	ISIS cell (linked to Paris network)	32 dead; the airport bombs were in the check-in hall	Landside dwell time is exposure - the settings guidance in one event
Berlin Christmas market attack	2016	Berlin, Germany	52.5049, 13.3352	Christmas market	Lone actor (failed asylum seeker, pledged)	A hijacked truck; 12 dead; attacker fled across Europe (fugitive phase)	Market vehicle barriers; also the fugitive lesson: he was stopped by an alert patrol in Italy days later
Manchester Arena bombing	2017	Manchester, UK	53.4881, -2.2439	Arena foyer	Lone actor with family accomplices	Suicide bomb in the foyer at concert end; 22 dead, mostly young	The finale/foyer geometry: timed for the exit surge - leaving minutes early is a real countermeasure
Las Ramblas attack	2017	Barcelona, Spain	41.3810, 2.1730	Pedestrian boulevard	Cell (with accidental precursor explosion in their safe house)	A van zig-zagged the boulevard; 13 dead	A cell's preparation accident (Alcanar) is the kind of anomaly neighbours reported - report gas/chemical anomalies at rental properties
Sri Lanka Easter bombings	2019	Colombo & Negombo & Batticaloa, Sri Lanka	6.9271, 79.8612	Churches + hotels	Local group (NTJ) with ISIS links	Eight near-simultaneous suicide bombs; 269 dead	Worship + hotel settings in one morning; festival-day bunching at doors
Christchurch mosque attacks	2019	Christchurch, New Zealand	-43.5321, 172.6362	Two mosques, Friday prayers	Lone actor (far-right, livestreamed)	51 dead; the attack was broadcast live by the attacker	Do not share attacker footage - distribution is part of the weapon; report the original to police/platforms
Kabul airport attack	2021	Kabul, Afghanistan	34.5659, 69.2818	Airport gate crowd (evacuation)	ISIS-K suicide bomber	170+ Afghans and 13 US personnel dead at the Abbey Gate crowd	Evacuation crowds at gates are the extreme form of bunching - authorities now treat gate geometry as a weapon
Itaewon crowd crush (not an attack)	2022	Seoul, South Korea	37.5345, 126.9946	Nightlife alley, Halloween	None - crowd density itself	159 dead in a sloped 4-metre alley at peak density	The deadliest entry on this list with no attacker: density is a hazard class of its own - see the crowd-crush plot row
Re'im music festival attack	2023	Negev, Israel	31.3987, 34.4717	Open-air festival	Hamas assault force (part of a mass cross-border attack)	364 festival-goers killed among 1,200+ total that day	Festivals near conflict borders carry the border's risk; event security perimeters and exits are the lesson taken worldwide
Moscow Crocus City Hall attack	2024	Krasnogorsk, Russia	55.8311, 37.3903	Concert hall + fire	ISIS-K cell (4 gunmen)	145 dead; shooting followed by arson of the hall	Fire + firearms combined: exits and smoke discipline decided survival as much as the shooting did

Longitude	Latitude	Event
139.7671	35.6812	Tokyo subway sarin attack
-97.5169	35.4729	Oklahoma City bombing
36.8172	-1.2864	US embassy bombings
-74.0134	40.7115	9/11 attacks
115.176	-8.7176	Bali bombings
-3.691	40.4065	Madrid train bombings
44.545	43.19	Beslan school siege
-0.0875	51.5252	London 7/7 bombings
72.8777	19.076	Mumbai attacks
10.2475	60.0237	Utøya & Oslo attacks
36.8039	-1.2566	Westgate mall attack
-71.0788	42.3498	Boston Marathon bombing
71.5466	34.0149	Peshawar Army Public School attack

34.4717	31.3987	Re'im music festival attack
37.3903	55.8311	Moscow Crocus City Hall attack

Country / State	Principal Dangers of Concern	Settings of Concern	Note for Citizens / Travellers
Afghanistan	Insurgent/terror government, ISIS-K attacks, kidnapping	Airport gates, mosques, schools, markets	Do-not-travel tier in most Western advisories
Burkina Faso / Mali / Niger (Sahel)	Jihadist insurgency, massacres, kidnapping of foreigners, PMC presence	Roads, mines, villages, hotels	Most of the territory outside capitals is no-go in advisories
Somalia	Al-Shabaab bombings and sieges	Hotels, government districts, markets in Mogadishu	Hotel sieges are the signature pattern
Nigeria	Boko Haram/ISWAP (northeast), mass kidnapping (northwest banditry), separatist violence (southeast)	Schools, highways, churches, farms	Risk is regional within the country - the map matters more than the flag
Haiti	Gang territorial control of the capital, mass kidnapping	Roads, neighbourhoods of Port-au-Prince	State authority has collapsed in much of the capital
Mexico	Cartel violence, express kidnapping, carjacking	Specific states/corridors (Sinaloa, Tamaulipas, Colima, Guerrero), highways at night	Tourist zones vary sharply from cartel-contested states - state-level reading is literal here
Ecuador	Cartel-faction war, prison massacres, armed robbery	Guayaquil and coastal provinces, prisons	Deteriorated within five years from a low-risk baseline - the cautionary example that risk maps expire
Ukraine	War: missile/drone strikes on cities, infrastructure attacks	Energy infrastructure, city centres, frontline regions	Air-raid alert discipline is the citizen skill; alerts are public and app-based
Russia	War spillover attacks (ISIS-K), drone strikes, detention risk for foreigners	Concert venues, border regions, transport	Foreign nationals face arbitrary-detention advisories from multiple governments
Israel & Palestinian territories	Cross-border attacks, stabbing/shooting attacks, rocket fire, war	Festivals near Gaza, Jerusalem flashpoints, checkpoints	Alert apps and shelter locations are public infrastructure - learn them on arrival
Lebanon	Border war spillover, sectarian flashpoints, economic-collapse crime	Southern suburbs, border zone, banks (collapse-era robberies)	Risk concentrates in specific districts
Pakistan	TTP and Baloch separatist attacks, sectarian bombings	Schools, mosques, markets, Balochistan and KP regions	Regional variation is extreme; Punjab cities are a different risk world from the frontier
Philippines	Abu Sayyaf kidnapping (Sulu archipelago), communist insurgency (rural), drug-war violence legacy	Southern waters, resorts in the far south	The kidnap-for-ransom maritime pattern is specific to the Sulu/Celebes seas
Myanmar	Civil war: airstrikes on gatherings, resistance/insurgent fighting	Markets, festivals, schools in contested regions	Airstrikes on civilian gatherings are this war's signature atrocity pattern
Sudan	Civil war: massacres, famine as a weapon	Khartoum, Darfur cities	State collapse war; humanitarian corridors are the citizen question
India	Maoist insurgency (central corridor), Kashmir militancy, communal mob violence, crowd crushes at pilgrimages	Pilgrimage routes, Kashmir, Chhattisgarh corridor	The crowd-crush and mob rows of the plots sheet are the high-frequency Indian risks
Indonesia	Residual jihadist cells, church bombings (Surabaya 2018 family suicide attacks)	Churches, police posts, tourist nightlife (Bali precedent)	Family-unit attacks (Surabaya) changed the lone-actor model - children were used as bombers
France / Belgium	Jihadist lone actors and cells, knife attacks	Terraces, markets, worship, transit	Europe's highest attack frequency of the 2015-2025 period; Run Hide Tell equivalents are official doctrine
United Kingdom	Lone-actor knife/vehicle attacks, residual Northern Ireland dissident activity	Bridges, markets, transit, worship	ACT (Action Counters Terrorism) is the official public reporting channel
Germany	Knife and vehicle attacks (markets, festivals), far-right plots	Christmas markets, festivals, asylum housing (arson target)	Market/festival vehicle barriers are now standard fittings
United States	Mass shootings (all motives, highest frequency), lone-actor terror, swatting, substation sabotage	Schools, workplaces, worship, concerts, parades	Run-Hide-Fight is the official public doctrine (DHS/FBI); leakage reporting is the prevention emphasis
Canada	Lone-actor vehicle/knife attacks (Toronto van 2018, London ON 2021), rare but present	Sidewalks, transit, worship	Lower frequency, same patterns; Toronto 2018 is the vehicle row's local entry
Australia	Lone-actor knife attacks (Bondi Junction 2024 - non-ideological), the Lindt siege precedent	Shopping centres, cafes	ESCAPE. HIDE. TELL. is the official Australian doctrine wording
China	Mass stabbings/vehicle attacks by aggrieved individuals (schools, hospitals, pedestrian zones), Xinjiang-related restrictions	School gates, hospitals, public squares	The pattern is grievance rampage rather than organized terror in recent years
Japan	Rare events: Aum legacy, lone arson/knife attacks (Kyoto Animation arson 2019, Osaka clinic arson 2021)	Animation studios, clinics, trains	Arson of occupied buildings is Japan's mass-casualty pattern - exit awareness is the lesson

Meeting Type	The Danger Pattern	Indicators	Safe-Meeting Protocol (the solution)
First date (from an app)	The meeting-point lure in its commonest form: relocation to a private second location, drink spiking, or a setup for robbery	Insistence on their place/a car/a second venue; secrecy pressure; a companion who 'happens' to join	Public staffed venue, daylight or busy evening, your own transport, a friend holding your location and check-in time; no relocation on the first meeting, ever
Marketplace buy/sell meetup	Robbery of the item or the cash, occasionally armed; fake listings for high-value goods (cars, phones, consoles)	Location changed last minute to a private address; price too good; refusal of public venues	Police-station safe-exchange zones (many cities run them), bank lobbies for payment, bring a second person for high-value items, never carry the full cash visibly
Rental / room viewing	Fake listings lure viewers to empty properties; also a burglary-reconnaissance pattern run in reverse (fake viewers casing homes)	Agent who will not meet at an office; pressure to bring deposit cash; address that is vacant and isolated	Verify the listing and agency independently; view with a companion in daylight; no cash deposits on the spot - ever
Job interview (unknown employer)	Fake employers harvest documents (identity theft) or lure to unsafe locations; in some regions, interview lures feed trafficking	Interview at a residence/hotel room; requests for passport/bank details before any offer; no verifiable company footprint	Interviews at verifiable business premises; never surrender original documents; tell someone the address and expected duration
Protest / demonstration attendance	Counter-protest clashes, police kettling and charges, lone-actor vehicle attacks on marches, agent-provocateur dynamics	A march route sharing space with an opposed rally; vehicles idling across the route; sudden police line movements	Stay mid-crowd but near side-street exits; note the dispersal direction before you need it; leave at the first vehicle or clash signal - the exit-scan habit
Religious / community meetings (new group)	Extremist recruitment pipelines begin as ordinary study/social meetings in some movements; cult isolation also begins here	Pressure to cut outside ties; escalating us/them teaching; secrecy about the group's own activities	Healthy groups tolerate questions, outside friendships, and leaving. Any group punishing all three is showing you the mechanism - believe it early
Business meeting in an unstable region	Kidnap targeting of foreign businesspeople is arranged through meeting schedules - the itinerary itself is the vulnerability	Local partners who publicize the itinerary; unscheduled venue changes; unvetted drivers	Itineraries on need-to-know; vetted transport; check-in discipline with your organisation; embassy registration
Journalist / activist source meetings	Sources and journalists are surveilled and occasionally attacked at meeting points in authoritarian settings	The source insisting on a location they control completely; unknown third parties present	Public, camera-covered, third-party spaces; digital hygiene (the communications compartmentation in this file) matters more than the venue
Aid / NGO distribution points	Distributions are attacked in war zones (the crowd is the target) and looted in collapse zones	Unannounced schedule changes creating unusual crowding; armed men observing the queue	Organizers: stagger and decentralize distribution. Recipients: the queue bunching rule - arrive across the window, not at its start
Rideshare / taxi pickup (the meeting with a stranger's car)	Fake rideshare pickups at airports and nightlife exits: the victim gets into the wrong car	A driver who will not confirm your name/code; a car matching the description but not the plate	Plate, photo, and the app's PIN feature checked BEFORE the door opens; if anything mismatches, you do not get in - no politeness exception
Online-arranged group meetups (hobby, gaming, fandom)	Generally safe and valuable; the rare risk is one bad actor using the group as access	A member steering meetups private and one-to-one; secrecy norms forming	Keep group meetups public and plural; new members meet the group, not an individual, first
Family / custody handovers in conflict cases	Handovers are a documented flashpoint for violence in high-conflict separations	Threats referencing the handover; a new partner appearing armed or with an entourage	Neutral staffed handover centres exist in many cities precisely for this; court orders can specify them - use them without embarrassment

Need	Official Contact / Database	Phone / Email (as published in the cited official sources)	Online Location (verbatim link, retrieved Oct 19, 2026)	Offline Location	What It Is For
EMERGENCY — attack or danger in progress	Local emergency number	911 (Canada/USA) - 999 (UK) - 112 (EU and most networks worldwide)		Where you are	The only correct first call during an event
Report terrorism concerns — Canada	RCMP National Security Information Network (NSIN)	Phone 1-800-420-5805 - Email RCMP.NSIN-RISN.GRC@rcmp-grc.gc.ca (per the RCMP reporting guide)	https://publications.gc.ca/collections/collection_2022/grc-rcmp/PS64-161-2021-eng.pdf	Any local police station or RCMP detachment; officers can also meet away from the station (per the guide)	Non-emergency tips about planning, preparation, radicalization to violence; the guide at the link explains what to report and how
Report non-imminent threats found online — Canada	RCMP "Report It" / CSIS	CSIS 613-993-9620 (per the Five Eyes release carried by newswire.ca)	https://www.newswire.ca/news-releases/five-eyes-security-and-intelligence-partners-release-report-on-young-people-and-terrorism-866061086.html	Local police for anything time-sensitive	Online extremist content, radicalization concerns, youth-focused guidance (the release links onward to the reporting routes)
In an attack — United Kingdom doctrine	ProtectUK (Counter Terrorism Policing)		https://www.protectuk.police.uk/print/pdf/node/431	Any police officer / venue staff	RUN HIDE TELL in full official detail, including what police need when you TELL
Why Run Hide Tell — official background	Counter Terrorism Policing (UK)		https://www.counterterrorism.police.uk/news/blog-why-were-talking-about-run-hide-tell/	—	The official explanation of the doctrine this section uses
Country-by-country danger levels — Canada	Government of Canada Travel Advice and Advisories		https://travel.gc.ca/travelling/advisories	Canadian embassies and consulates abroad (addresses via the same site)	The official risk level for every destination - the source the STATE LIST defers to; check before any travel
The incident database — every recorded attack since 1970	Global Terrorism Database (GTD), START, University of Maryland		https://grevd.org/consortium/partner/gtd	University of Maryland (research access)	200,000+ incidents with date, location, weapons, target, casualties, responsible group - the database behind the ERUPTIONS sheet's kind of record. Note: GTD coverage runs to ~2020; current-year tracking is the Global Terrorism Index (IEP)
Databases compared — what exists and its limits	IEEE TechNav chronology-databases overview; Harvard Library research guide		https://technav.ieee.org/topic/terrorist-incident-chronology-databases/	University libraries	GTD, RAND Database of Worldwide Terrorism Incidents, CPOST Suicide Attack Database - described and compared, with their underreporting caveats
Fugitives — identifying information published BY authorities	Interpol Red Notices (public search) and national most-wanted lists (e.g., FBI Most Wanted, Europol Most Wanted, RCMP wanted)	Via each agency (numbers vary by country)	(Named here without a link rather than a guessed URL: search "Interpol Red Notices" or your national police "most wanted")	Any police station can act on a sighting	THIS is where identifying information on fugitives lawfully lives: names, photos, and particulars published by the authorities themselves so citizens can identify and report - kept current, legally vetted, and tied to live cases
Safe places to meet / exchange offline	Police-station safe exchange zones; bank lobbies; embassy/consulate public areas	Local police non-emergency line for zone locations		Your city police service (many run marked safe-exchange zones in station lots)	The offline answer to the MEETINGS sheet: staffed, camera-covered, official ground
